

# How to deploy Paralyzed by Parallax website on PythonAnywhere

Scribe<sup>==</sup>

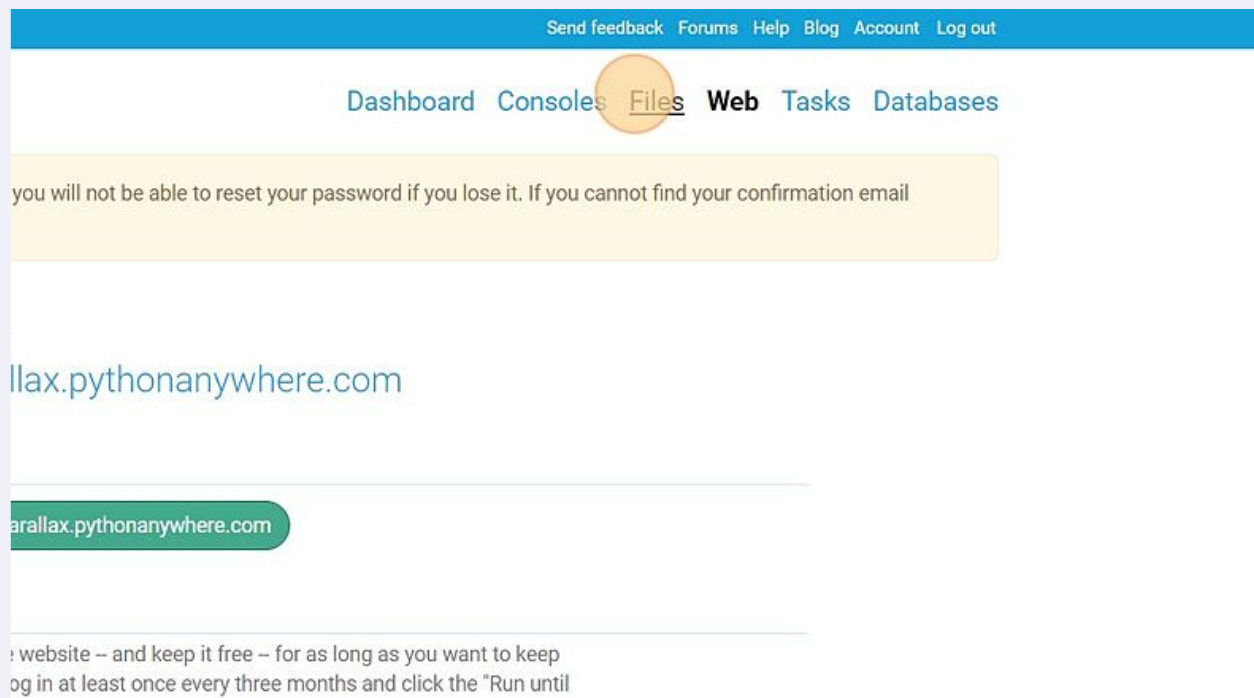

1 Navigate to [www.pythonanywhere.com/user/ParalyzedByParallax](https://www.pythonanywhere.com/user/ParalyzedByParallax)

2 Click "Web"

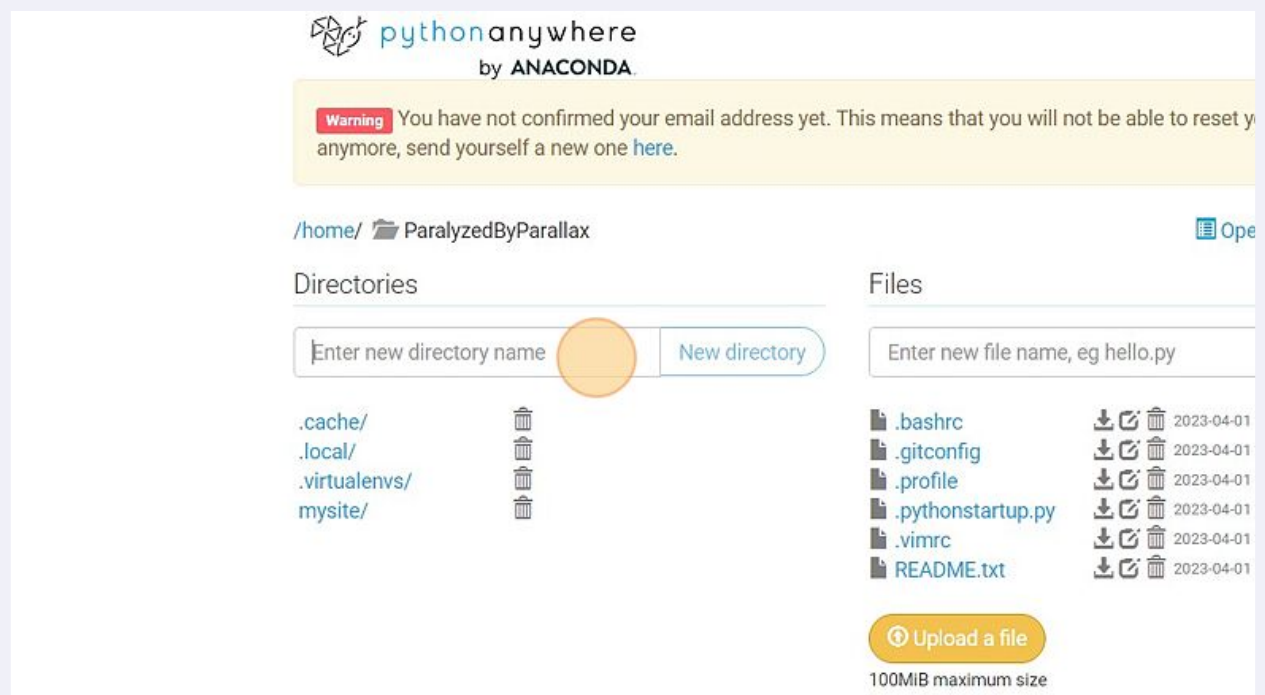

3 Create Web App

#### 4 Click "Files"

#### 5 Click the "Enter new directory name" field.

## 6 Click "New directory"

The screenshot shows the PythonAnywhere dashboard for a user named 'ParalyzedByParallax'. At the top, there's a warning message: 'Warning You have not confirmed your email address yet. This means that you will not be able to reset your password anymore, send yourself a new one [here](#).' Below the warning, the breadcrumb path is '/home/ ParalyzedByParallax'. On the right, there's a 'Dash' link and an 'Open Bash console' button. The main content area is divided into two sections: 'Directories' and 'Files'. In the 'Directories' section, there's a list of existing directories: '.cache/', '.local/', '.virtualenvs/', and 'mysite/'. A 'New directory' button is highlighted with an orange circle. In the 'Files' section, there's a text input field with the placeholder 'Enter new file name, eg hello.py'. Below the input field, there's a list of files: '.bashrc', '.gitconfig', '.profile', '.pythonstartup.py', '.vimrc', and 'README.txt'. Each file entry includes icons for download, upload, and delete, along with its creation date (2023-04-01 13:42) and size. At the bottom of the 'Files' section, there's an 'Upload a file' button and a note '100MiB maximum size'.

pythonanywhere by ANACONDA. Dash

**Warning** You have not confirmed your email address yet. This means that you will not be able to reset your password anymore, send yourself a new one [here](#).
